PROFESSIONAL SUMMARY

Aspiring Full Stack Developer with a strong foundation in modern programming and web technologies. Interested in building responsive and user-friendly applications with hands-on project experience, problem-solving skills, and logical thinking. Eager to contribute to dynamic software development teams.

EDUCATION

B.E in Computer Science Engineering *2023–2027*
Government Engineering College, Mosalehosalli
8.6/10

PUC / 12th Standard (PCMB) *2021–2023*
Government PU College, Kadur, Chikkamagalore(D)
89.8%

SSLC *2020–2021*
ST. Theresa's Higher Primary School, Theresapura, Arsikere(T), Hassan(D)
97%

TECHNICAL SKILLS

Languages	Python, Java, C++, C
Database Systems	MongoDB, MySQL
Developer Tools	GitHub, Git
Web Technology	JavaScript, HTML, CSS
Frameworks	Data Analysis, Flask, Machine Learning, Artificial Intelligence
Soft Skills	Communication Skills

PROJECTS

Smart Trolley Billing System
An IoT-based retail solution designed to modernize the shopping and checkout experience. The system integrates a physical smart shopping trolley (equipped with an RFID reader, push buttons, status buzzer, and an I2C LCD screen) with a premium, responsive glassmorphic Web Dashboard driven by a Flask/MongoDB backend

Smart Attendance System using Face Recognition
Developed a face recognition-based smart attendance system using Python and OpenCV to automate attendance tracking, reduce manual effort, and prevent proxy entries, with real-time data storage and reporting features.

Co-Living Harmony System
Designed and developed a technology-driven co-living management system aimed at improving shared accommo- dation experiences. Implemented features such as user interfaces, data management, and communication modules to streamline operations and enhance resident engagement.

Weather Data Visualization using Python
Built a Python-based weather data visualization tool to analyze environmental data. Extracted and cleaned datasets, performed data analysis, and generated visual dashboards including line charts, bar graphs, and heatmaps for better interpretation of weather trends.

Automated Report Generator
Developed an Automated Report Generator that converts raw data into structured reports with minimal manual effort. Implemented data processing, template-based report generation, and user-friendly interfaces to enhance efficiency and accuracy.

CERTIFICATIONS & BADGES

- Youth Employment Program – TCS Empowers
- Hackthon Participation – Rajeev Institute of Technology
- Python Internship – CodTech IT Solutions
- Completed IPR Awareness Program
- Git & Github Bootcamp
- NSPC-2025
- Python Bootcamp
