K M Lohith

Location — +91 9353180038 — llohithacharya@gmail.com — LinkedIn — GitHub

PROFESSIONAL SUMMARY

Highly motivated professional seeking to leverage skills and experience to contribute to a dynamic team.

EDUCATION

B.E in Computer Science Engineering, Government Engineering College, Mosalehosalli 2023–2027
8.6/10

PUC / 12th Standard (PCMB), Government PU College, Kadur, Chikkamagalore(D) 2021–2023
89.8%

SSLC, ST. Theresa's Higher Primary School, Theresapura, Arsikere(T), Hassan(D) 2020–2021
97%

TECHNICAL SKILLS

Programming: javascript, python, java, c++, c
Web Technologies: flask, html, css
Databases: mongodb, mysql
AI/ML: data analysis
Tools: communication, github, git

PROJECTS & EXPERIENCE

Smart Trolley Billing System GitHub

- An IoT-based retail solution designed to modernize the shopping and checkout experience.
- The system integrates a physical smart shopping trolley (equipped with an RFID reader, push buttons, status buzzer, and an I2C LCD screen) with a premium, responsive glassmorphic Web Dashboard driven by a Flask/MongoDB backend.

Smart Attendance System using Face Recognition GitHub

- Developed a face recognition-based smart attendance system using Python and OpenCV to automate attendance tracking, reduce manual effort, and prevent proxy entries, with real-time data storage and reporting features.

Co-Living Harmony System GitHub

- Designed and developed a technology-driven co-living management system aimed at improving shared accommo- dation experiences.
- Implemented features such as user interfaces, data management, and communication modules to streamline operations and enhance resident engagement.

Weather Data Visualization using Python GitHub

- Built a Python-based weather data visualization tool to analyze environmental data.
- Extracted and cleaned datasets, performed data analysis, and generated visual dashboards including line charts, bar graphs, and heatmaps for better interpretation of weather trends.

Automated Report Generator GitHub

- Developed an Automated Report Generator that converts raw data into structured reports with minimal manual effort.
- Implemented data processing, template-based report generation, and user-friendly interfaces to enhance efficiency and accuracy.

Python Programming Intern, Codtech Solutions (Online)

- 2026 Worked on Python modules, problem-solving tasks, and mini projects while gaining practical coding experience.

CERTIFICATIONS & ACHIEVEMENTS

- Youth Employment Program – TCS Empowers
- Hackthon Participation – Rajeev Institute of Technology
- Python Internship – CodTech IT Solutions
- Completed IPR Awareness Program
- Git & Github Bootcamp
- NSPC-2025
- Python Bootcamp
